LIVE ANALYTICS PORTFOLIO

PROFESSIONAL SUMMARY

Early-career data analyst with hands-on experience transforming raw and operational data into clear analysis, reports and decision-ready insights using Excel, SQL, Python and Power BI. Strong in data cleaning, validation, statistical analysis, KPI reporting and dashboard development, with practical exposure to digital systems, field data activities and stakeholder-facing implementation work. Brings a strong numerical mindset, attention to accuracy and the ability to communicate analytical findings clearly to non-technical users.

TECHNICAL SKILLS

Data Analysis & Reporting: Excel, SQL, Power BI, Python, pandas, NumPy

Business Analytics: KPI reporting, dashboard development, data visualisation, trend analysis, statistical analysis

Data Quality: Data cleaning, validation, consistency checks, completeness review, structured data preparation

Additional Technical: scikit-learn, SHAP, FastAPI, REST APIs, Git, GitHub

EXPERIENCE

Datamatics Eswatini | Software Developer Intern

- Supported data collection, validation and quality-checking activities for digital systems and client projects, reviewing records for completeness, consistency and accuracy before reporting and system use.
- Contributed to testing and validation of the ESPPRA WCA Data Collection Tool, including review of captured data and support for information used in reports, dashboards and stakeholder discussions.
- Participated in field and implementation activities requiring accurate handling of operational data, user feedback and system outputs across client-facing assignments.
- Worked directly with project teams and external stakeholders during demonstrations and deployment support, including presenting the SDS system alongside Ministry of Labour and Social Security personnel.

FEATURED ANALYTICS PROJECT

FinAccess Eswatini [Live App](#) | [GitHub](#)

Financial Inclusion Analysis | Statistical Reporting | Explainable Machine Learning

- Prepared and analysed 1,051 survey responses across 199 raw variables using survey weights, statistical testing, leakage review and feature engineering to identify factors associated with financial inclusion and mobile-money adoption in Eswatini.
- Built validated analytical pipelines and translated complex model outputs into interpretable findings using SHAP, with protected-holdout ROC-AUC results of 0.745 and 0.726.
- Delivered the analysis through a public web application designed to make results accessible to non-technical users, demonstrating end-to-end data preparation, analysis, reporting and communication.

EDUCATION

University of Eswatini | Bachelor of Science in Information Technology - Final Year
